

THE FIRST NAME IN QUALITY COUPLINGS

Installation, Inspection, Operation & Maintenance Guide

Patent Pending

Model 335NTEL Swivel Coupling

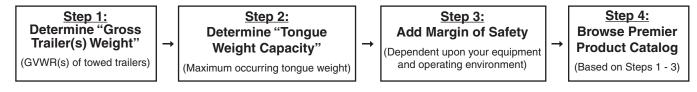

IMPORTANT

Read these instructions completely before installing, using or attempting to repair this product. If you have any questions, call Premier at (800) 255-5387 or (503) 234-9202.

Selecting The Right Equipment

Whatever your application, selecting the proper equipment for the job is very important. Proper selection along with regular inspection and maintenance will help keep operating costs minimal while providing long life to each component. Below are general guidelines for selecting Premier Couplings and Drawbar Eyes. If you feel that your application is unique, please give Premier a call so that we may help you through the selection process.

Follow these four steps to ensure proper selection of Premier Couplings and Drawbar Eyes.

Step 1: Determine "Gross Trailer(s) Weight"

"Gross Trailer(s) Weight" is usually determined by the Gross Vehicle Weight Rating (GVWR). This information is attached to the trailer by the trailer manufacturer.

For "Double Trailer" configurations, only the rear trailer is considered when selecting your Premier Coupling or Drawbar Eye. In this example, a Coupling and Drawbar Eye with a "Gross Trailer Weight" rating of 40,000 lbs. (18,143 kg) would be the minimum rating acceptable for normal, over-theroad applications (see Tongue Weight section below).

Example only, each application may vary and should be considered unique.

For "Triple Trailers", only the two most rearward trailers are considered in selecting your Premier Coupling or Drawbar Eye. In this example, a Coupling and Drawbar Eye with a "Gross Trailer Weight" rating of 80,000 lbs. (36,287 kg) would be the minimum acceptable for normal, over-the-road applications (see Tongue Weight section below).

Step 2: Determine "Tongue Weight Capacity"

"Tongue Weight Capacity" is the maximum expected weight at the drawbar eye. If a hinged drawbar is used, the maximum weight will be approximately 1/2 the overall drawbar weight. If a non-hinged drawbar is used and the actual tongue weight is not known, you can approximate the weight by multiplying the GVWR of the towed trailer by 15%. However, each application is unique and the best practice is to weigh the tongue when the trailer is loaded to its GVWR.

Step 3: Considering Operating Conditions and Environments

Environments such as rough uneven roads or off-road use can dramatically increase shock loads to both drawbar eyes and couplings. In general, increasing the "Gross Trailer Weight" (Step 1:) and "Tongue Weight Capacity" (Step 2:) by a minimum of 25% will be sufficient for many applications. Even if an application is used off-road occasionally, the minimum increase necessary for Gross Trailer and Tongue Weight is 25%. Certain types of equipment and/or operating practices can also dramatically increase loads through equipment binding and/or improper loading practices. Of special concern is high tongue weight. However, each application is unique and every environment different, therefore your application may require more than 25%.

Once both "Gross Trailers(s) Weight" (Step 1:) and "Tongue Weight Capacity" (Step 2:) have been determined, evaluate your operating conditions and apply an appropriate margin of safety.

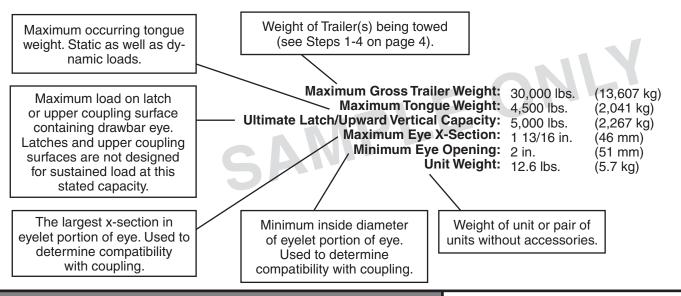

Step 4: Browse Premier Product Catalog

Browse the Premier Product Catalog and refer to the "Specifications" section of each product. Be sure to review the "Understanding Premier Load Specifications" section and "Coupling to Drawbar Eye Cross-Reference" sheet on the next couple pages.

Understanding Premier Load Specifications

Each Premier product undergoes extensive design and testing prior to being introduced. We use the latest in Computer Aided Design and Analysis Software as well as physical destructive tests. Premier's published load specifications are the maximum load a given product or part will withstand without failure. Premier's testing procedures closely follow the Society of Automotive Engineers (SAE) guidelines of Recommended Practice for testing Couplings and Drawbar Eyes (SAE J847 & J849).

Importance of Inspection and Maintenance

Safety is our #1 Priority: Through high quality designs and unsurpassed quality control procedures, Premier assures our customers that our focus on safety continues to be our #1 priority.

Scheduled Inspection & Maintenance: Regularly scheduled inspection and maintenance are essential for maintaining safe and efficient operations whether you are using Couplings, Drawbar Eyes, Jacks, Hinge Assemblies, or any other Premier product. Inspection and maintenance are necessary for proper function and will also keep repair costs to a minimum.

Technical Literature: Premier provides important literature to assist you with our products. We package and attach *Installation, Inspection, Operation & Maintenance Guides*, or *Service Guides*, to each of our major products. This literature is also available to view and/or print from our website at <u>www.premier-mfg.com</u>. These supply you with important information and help guide you through installation, inspection, operation, routine maintenance and part replacement.

Wear Gages: In accordance with the Federal Motor Carrier Safety Regulations, we created Wear Gages to assist you in determining the wear limits of Premier couplings and drawbar eyes. See details on catalog pages 7 & 75.

Additional Product Resources at Your Fingertips

Customer Service: We are always here to support you. Do you need additional information or assistance? Your phone calls are greeted by our courteous receptionist, during business hours. We have exceptional, personable Customer Service Reps for you to rely on. If you have product questions or want to place an order, you can speak directly with one of our experienced and knowledgeable Customer Service Representatives.

Sales Representatives: Would you like on site training or assistance? Contact one of our veteran Premier Sales Reps for more information about product training for your staff. Or be sure to visit with them at a Trade Show (see website for schedule).

www.premier-mfg.com: Our website is an informative resource at your fingertips. In addition to our Installation and Service Guides, you will find our Sales Representatives, distributor locations, online catalog pages, product specifications, how to select product, trade show schedule, and links to trucking resources.

† Saf-Tite Product

* Industrial Application

CAUTION: Verify that both the coupling's and drawbar eye's rated capacities meet your application(s) requirements.

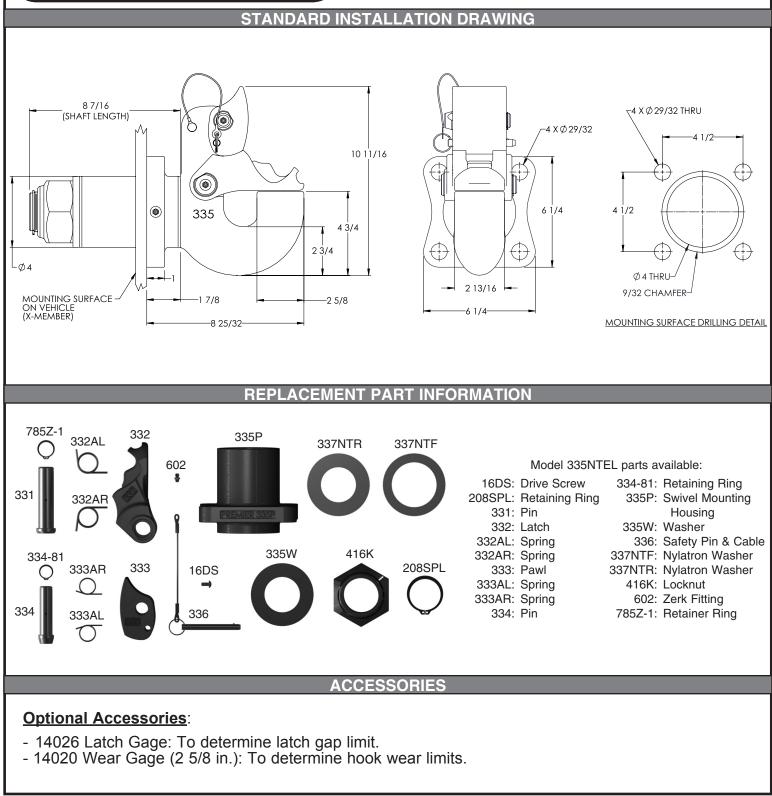

Model 335NTEL Coupling SPECIFICATIONS AND LOAD CAPACITIES

SAFETY WARNING

This product is designed for towing under normal conditions within the stated gross trailer weight. Do not overload or abuse this product. Overloading or abuse may lead to property damage, severe injury, or death.

Gross Trailer Weight: 110,000 lbs. (49,895 kg) Maximum Tongue Weight: 20,000 lbs. (9,072 kg) Ultimate Latch Capacity: 65,000 lbs. (29,484 kg) Maximum Eye X-Section: 1 3/4 in. (44 mm) Minimum Eye Opening: 3 in. (76 mm) Unit Weight: 63.5 lbs. (28.8 kg)

INSTALLATION

<u>NOTE</u>: DO NOT USE SWIVEL-TYPE DRAWBAR EYES WITH THE 335NTEL COUPLING.

The 335NTEL Coupling is only to be used and maintained with Premier parts listed in the Replacement Part Information section. Any substitution or use of non-Premier parts in a 335NTEL Coupling will VOID ALL PRODUCT WARRANTY.

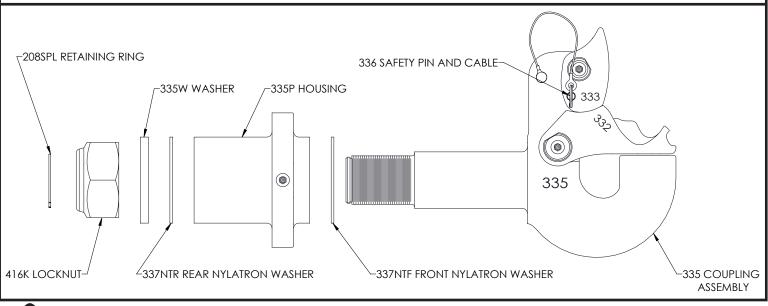

Installation Procedure:

- The 335NTEL Coupling must be installed to comply with the Federal Motor Carrier Safety Regulations. Specifically, Section 393.70, Paragraph C: "Towing of Full Trailers." Prior to install or operation, consult with local, State and Federal agencies, as there may be additional applicable laws governing installation and use of this product.
- Make certain that the cross member the 335NTEL Coupling is to be mounted on is of sufficient strength to withstand the load rating of the coupling.
- 3. Using the Standard Installation Drawing, measure and layout the cross member and then drill the holes. Note: Center hole for the 335P Housing is to be drilled to Ø4 in. (102 mm).
- 4. Mount the 335P onto the tailboard positioning it where the "Premier 335P" lettering is facing upward. Using four 7/8" grade-8 bolts and grade-C locknuts, tighten and torque to the manufacturers recommended value.

- 5. Generously lubricate both faces of the 337NTF Washer and place it onto the shaft of the 335 Coupling and insert the shaft into the 335P Housing (use extreme care not to damage the threads on the shaft). Generously lubricate both faces of the 337NTR Washer and place it onto the shaft of the 335 Coupling.
- 6. Clean and lubricate all visible threads on the shaft.
- 7. Slide the 335W Washer and thread the 416K Locknut on the shaft. Tighten the locknut until all slack between the 335 Coupling body and the 335P Housing has been removed. <u>WARNING</u>: Do NOT rotate the coupling body to tighten the nut. Continue to tighten the locknut until the desired rotational stiffness of the coupling is acquired. Install the 208SPL Retaining Ring into the groove at the end of the shaft.

8. Grease the 335P Housing with 3-4 pumps from a mechanical grease gun at the provided grease zerk fitting.

- Once mounted, check the latch components for proper operation and clearances (see the Inspection/Operation/Maintenance section for opening and closing the latch).
- 10. An "IMPORTANT WARNINGS!" sticker was enclosed. This must be attached to the coupling or cross member and be visible for the end user to read.

Inspection and Maintenance:

- Visually inspect the coupling body and latch components for cracks, impact damage and/ or deformation before each and every use. Do NOT use if any of these conditions exist.
- Check the gap between the 332 Latch and the top of the pintle/hook on the coupling body before each and every use. A gap of 3/8" or more means the coupling must be taken out of service and repaired or replaced.
- If the wear area on the pintle/hook has worn 20% or more from its original cross-section, the coupling is considered out-of-service and must NOT be used.
- 4. Lubrication of the latch components must be performed at 90-day intervals or sooner depending on the operating environment. Lubricate the latch components with a mechanical grease gun, applying 2 pumps into the grease zerks in the 331 & 334 pins. Rotate each latch component several times to evenly distribute the lubricant. Lubricate the 335P Housing at the grease zerk using a mechanical grease gun and applying 3-4 pumps.
- 5. Remove any excess lubricant with a rag. Do not apply lubricant to the pintle/hook or saddle area of the coupling.
- Check for wear on both 337NTF & 337NTR Washers. Any slack should be removed by tightening the 416K Locknut. Excessively worn washers should be replaced immediately.
- Never weld on any Premier part in order to repair damaged or worn areas. Field and/or shop welds are inadequate and may further weaken the coupling.
- 8. WARNING: Other inspection and maintenance procedures are also required prior to the operation of combination vehicles. Consult and follow all Federal Motor Carrier Safety Regulations as well as local, state and federal guidelines.

Operation:

OPENING Coupling Latch:

1. While facing the 335NTEL Coupling, remove the 336 Safety Pin. Place the palm of your hand at the very top of the 333 Pawl and push straight back. Once the pawl rotates back far enough it will release the 332 Latch, allowing it to open.

CLOSING Coupling Latch:

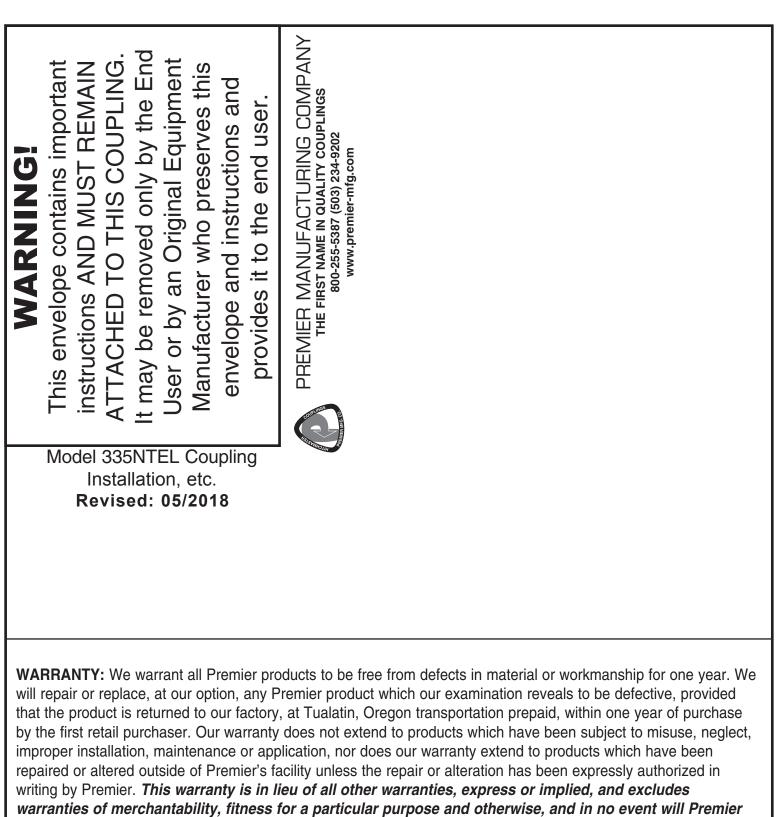

- Grasp the tip of the 332 Latch (there is a concave pocket to grab onto) and pull downward towards the top of the pintle.
 Once the latch nears the top of the pintle the 333 Pawl will rotate outward locking the 332 Latch into place on top of the pintle. Place the 336 Safety Pin into the hole in the 333 Pawl, securing the latch system. Do not use coupling without the 336 Safety Pin installed.
- This product is designed to be operated within its free rotation limits. It is the responsibility of the vehicle designer/end user to ensure that these limits are not exceeded (do not bind-up/ jackknife).
- 4. <u>WARNING</u>: Prior to towing, make certain that adequately rated safety chains have been properly connected.

IMPORTANT GUIDELINES that apply to all Premier Non-Air Couplings

- Do not weld on any coupling assembly
- Always use Grade-8 fasteners properly torqued
- Do not apply lubricants to the coupling hook
- Clean & inspect coupling for damage & excessive wear prior to each and every use
- Lubricate all coupling components at a minimum of 90 day intervals
- Do not bind-up (Jackknife) any application as stresses can cause damage to products or components, resulting in failure and detachment of the trailer while in use

ATTENTION ! End Users must read and follow this information. **DISTRIBUTORS & OEM'S:** Please ensure that your customers are made aware of the following information on this page. (1) VERIFY THAT BOTH COUPLING'S AND (8) DO NOT APPLY LUBRICANTS TO THE COUPLING DRAWBAR EYE'S RATED CAPACITIES MEET HOOK OR DRAWBAR EYE LOOP, AS THEY YOUR APPLICATION(S) REQUIREMENTS. CAN COVER UP POSSIBLE DAMAGE AND ACCELERATE WEAR. (2) DO NOT OVERLOAD COUPLING OR DRAWBAR EYE. (9) ALWAYS ABIDE BY ALL APPLICABLE STATE AND FEDERAL REGULATIONS GOVERNING SAFE (3) INSPECT COUPLING, LATCH AND DRAWBAR AND PROPER TRANSPORTATION. EYE FOR CRACKS, BENDING DAMAGE OR EXCESSIVE WEAR, DO NOT USE IF ANY OF (10) NEVER STRIKE ANY OF THESE COMPONENTS **THESE CONDITIONS EXIST!** WITH A HAMMER OR ANY OTHER DEVICE. (4) CHECK FOR GAP BETWEEN CLOSED LATCH (11) ALWAYS VERIFY PROPER OPERATION AND TOP OF HORN OR COUPLING BALL. OF LATCHING SYSTEM AND COUPLING DO NOT USE IF GAP IS 3/8 IN. OR MORE. COMPONENTS PRIOR TO DRIVE OFF. (5) MAKE SURE COUPLING IS LATCHED AND THAT (12) NEVER USE A COUPLING THAT YOU DO NOT LATCH WILL NOT OPEN. FULLY UNDERSTAND HOW TO PROPERLY OPERATE AND VERIFY SECURE LATCHING OF. (6) PRIOR TO USE, ALWAYS CONNECT SAFETY CHAINS OF ADEQUATE STRENGTH FOR (13) NEVER REPLACE ANY PART IN ANY OF LOAD(S) BEING TOWED. PREMIER'S ASSEMBLIES WITH NON-PREMIER COMPONENTS, DOING SO WILL VOID ALL (7) DO NOT BIND-UP (JACKKNIFE) ANY WARRANTY AND POTENTIALLY COMPROMISE APPLICATION AS STRESSES CAN CAUSE THE UNIT'S INTEGRITY, WHICH COULD RESULT DAMAGE TO THE COUPLING, DRAWBAR EYE, IN PROPERTY DAMAGE, SERIOUS INJURY, OR OTHER COMPONENTS OR ANY COMBINATION DEATH. OF THEM. JACKKNIFING MAY RESULT IN FAILURE OF PRODUCTS OR COMPONENTS, RESULTING IN DETACHMENT OF THE TRAILER WHILE IN USE.

be liable for incidental, special, contingent or consequential damages.
